IBRD • IDA | WORLD BANK GROUP

GHCC

TB MAC rationale

- Complex natural history, range of interventions, variation in settings => global and country decision makers face great uncertainty
- Modelling can be used to compare strategies and quantify uncertainty
- But
 - Lack of co-ordination
 - Limited data, models and modellers
 - Decision makers & modellers uninformed

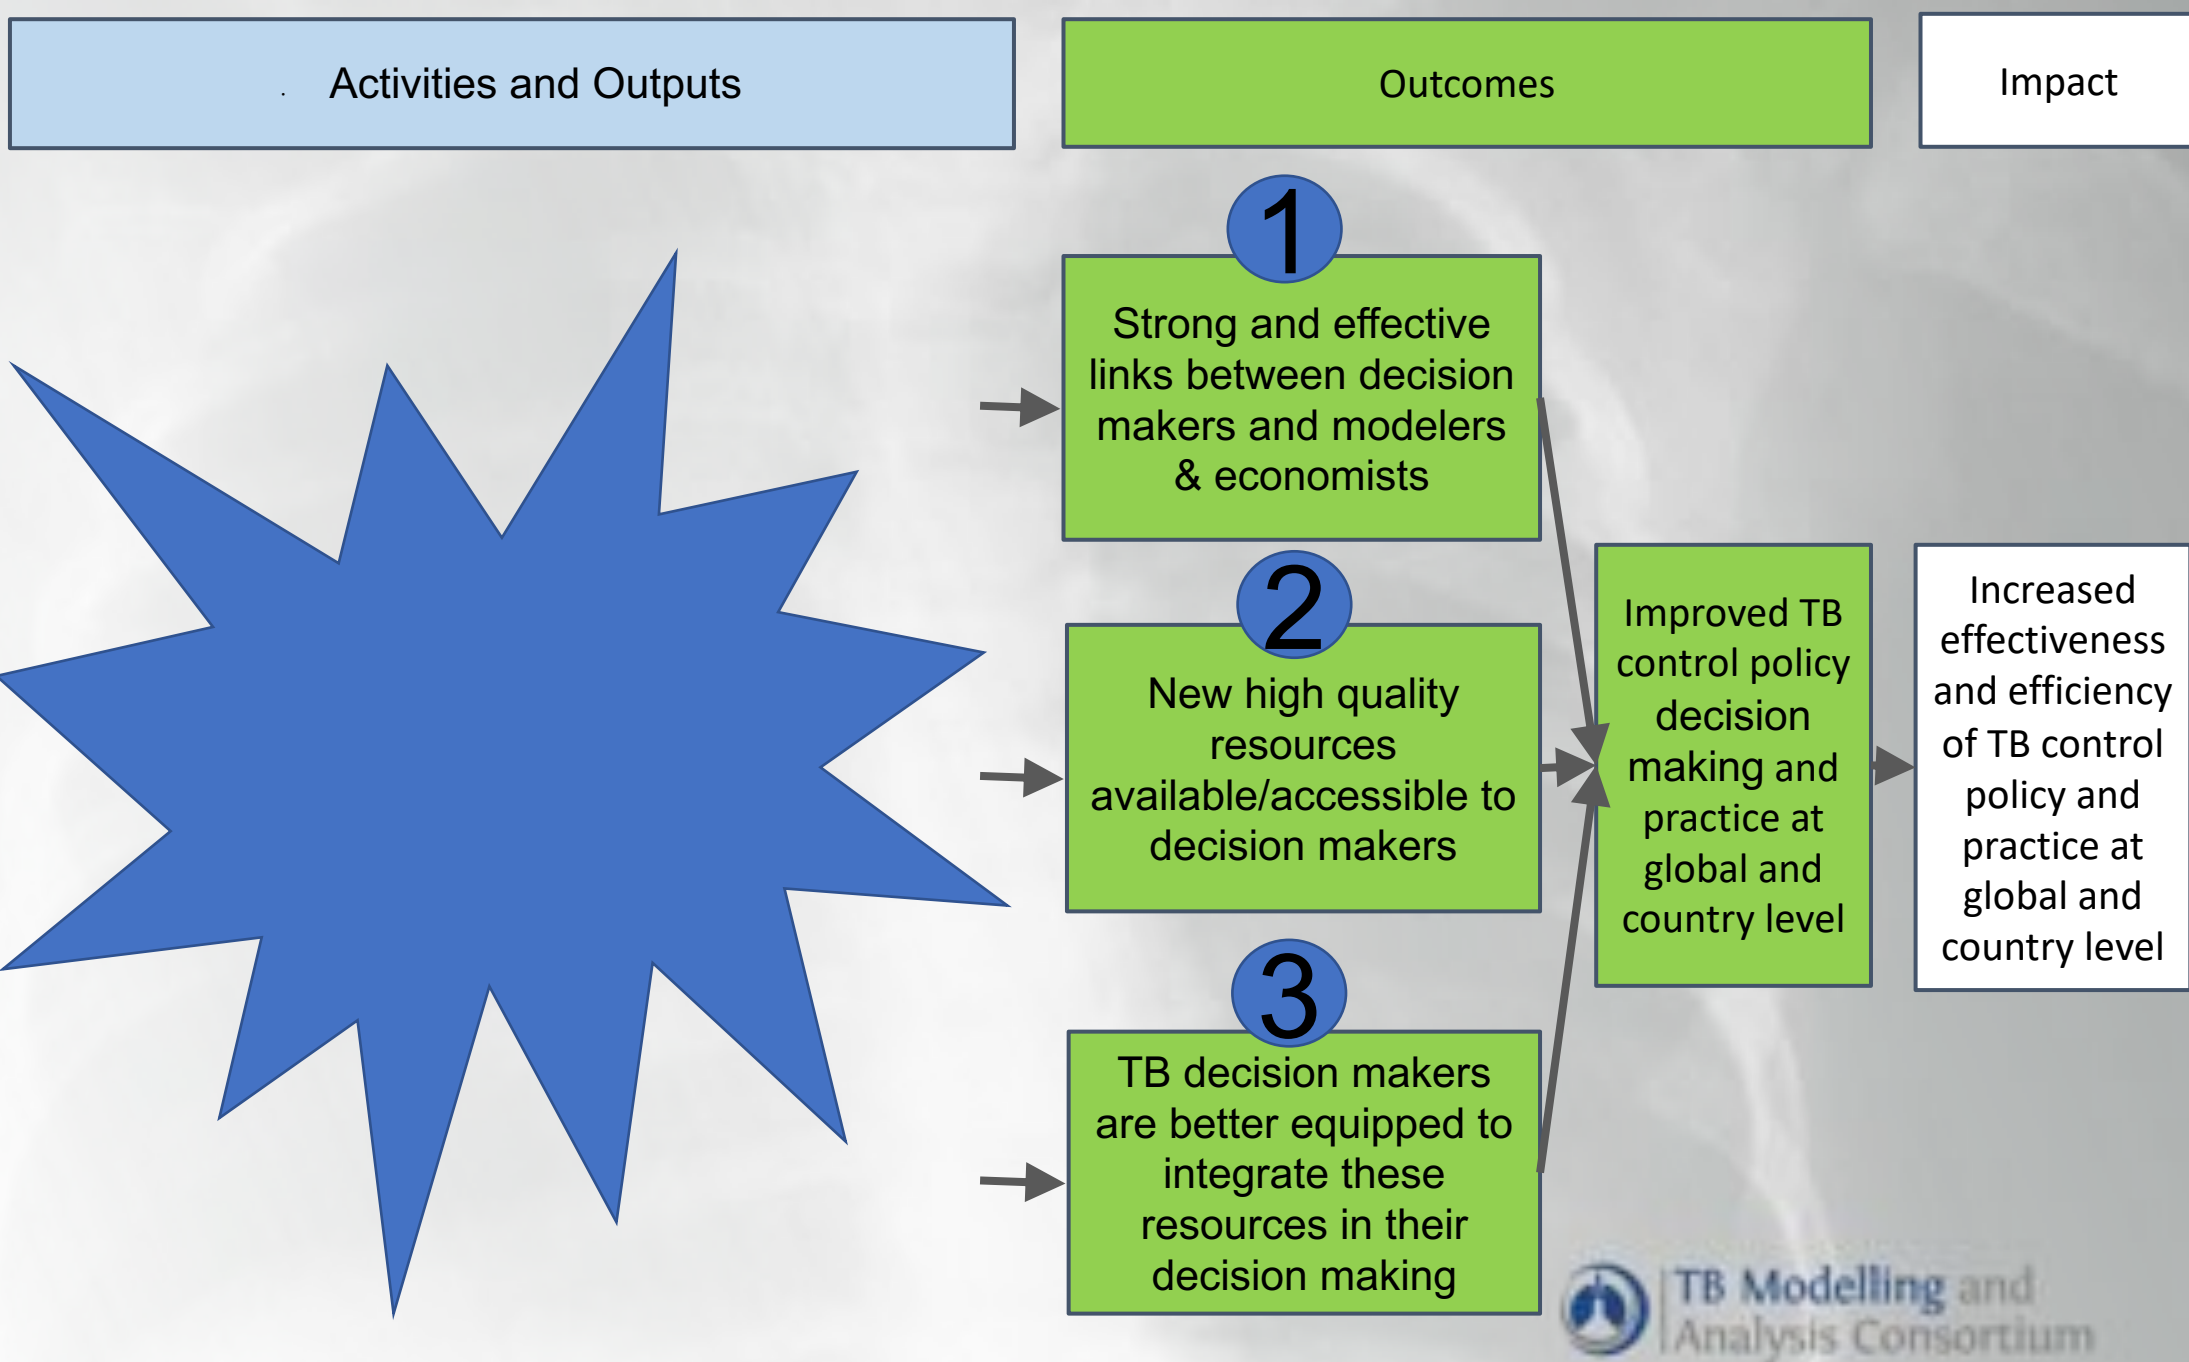

TB MAC impact 2012-16

- Helped foster modeller <--> stakeholder links
- Provided evidence at numerous high level meetings
 - GFATM decision not to reduce the % of funds allocated to TB
- Influenced development of models/methods with impact at
 - Global level
 - WHO GTB methods for HIV+/- TB incidence and mortality
 - Country level
 - South Africa: 'Targets' work used for 1st TB&HIV investment case, first ringfenced TB grant & increased domestic funding
 - TB MAC influenced models supported NSP and GFATM submissions in increasing # countries
- Supported WHO Task Force for TB Impact and Measurement to include modelling in mandate

But much more to do...

TB MAC
Strategy
'17-20

TB Modelling and Analysis Consortium - Who

Steering Committee

- Katherine Floyd - WHO
- Anna Vassall - LSHTM
- Anna Bershteyn - IDM
- Frank Cobelens - AIGHD
- Geoff Garnett – BMGF
- David Dowdy – JHU
- Michael Kimerling - KNCV
- Nick Menzies – Harvard
- Ted Cohen - Yale

Advisory Panel

- Dr Jeremiah Chakaya Muhwa – The Union
- Liz Corbett - LSHTM
- Philippe Glaziou - WHO
- David Wilson – World Bank
- Sevim Ahmedov – USAID
- Johannes Hunger – GFATM
- Adam Macneil - CDC
- Geoff Garnett – BMGF
- Sahu Suvanand – StopTB

Secretariat

- Finn McQuaid
- Tina Sachs/ Kristian Godfrey
- Richard White

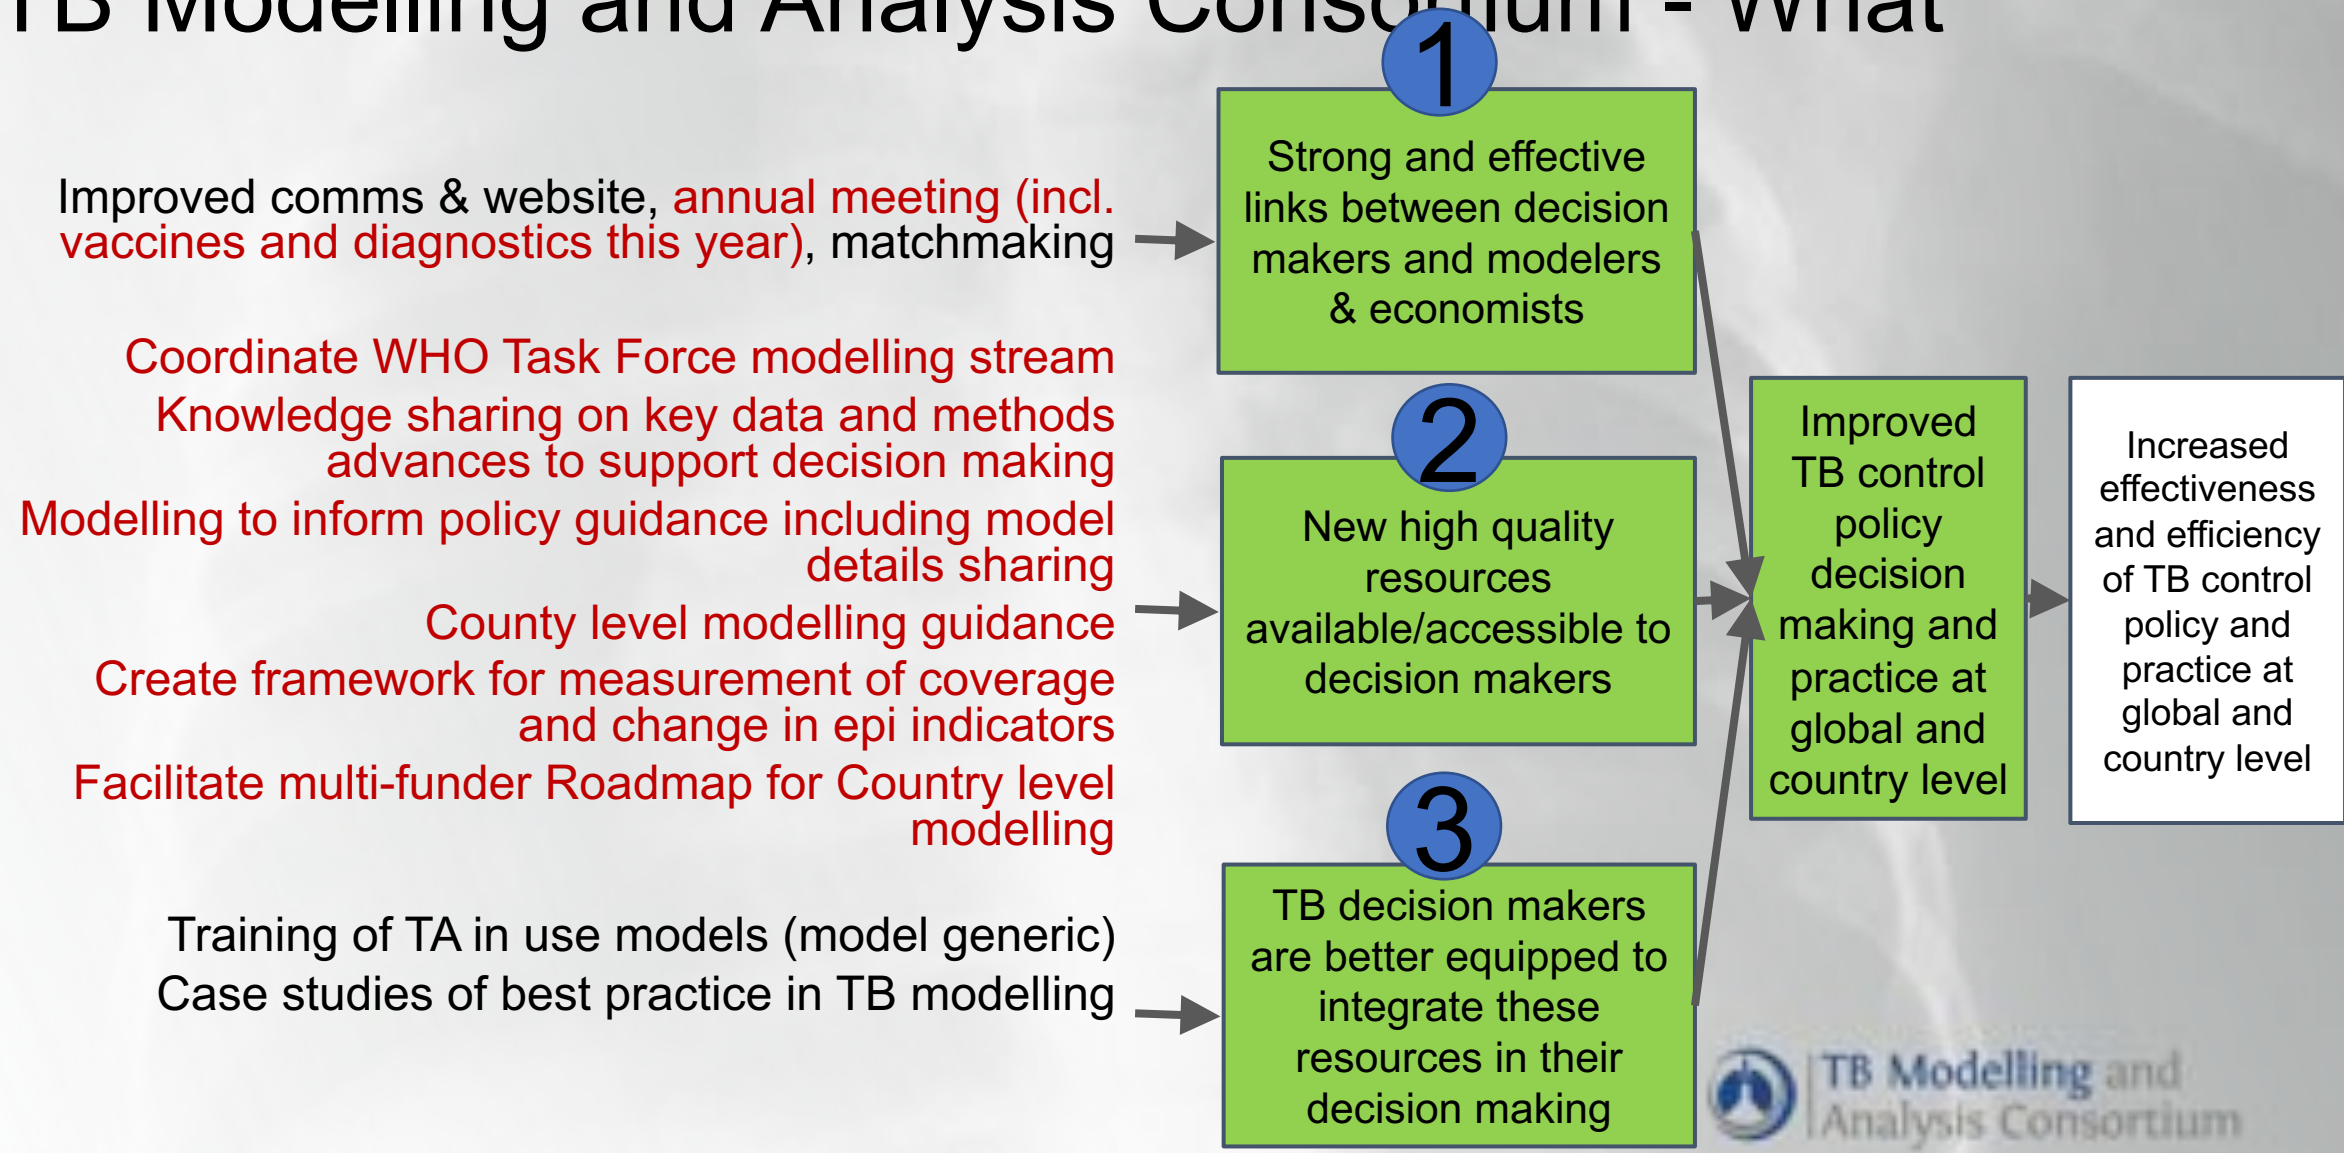

Funding:

TB Modelling and
Analysis Consortium

TB Modelling and Analysis Consortium - What

- Catalogue of country-level TB models
- Collection of country-level applications
- Case studies of working with decision-makers
- Compendium of modelling tools
- Country level modelling guidance

Guidance for
country-level
TB modelling

Modelling
for TB policy-makers

Policy-making
for TB modellers

TB Modelling and Analysis Consortium

Increasing the Effectiveness of TB Care and Prevention

14/05/19

Completed at the CHCO launch that
looked at Study Registrars (SRs)
Account to 2019 - 2020

TB MAC joined the consortium that
looked at the Roadmap
Account to 2019 - 2020

Overview of this meeting

Mon / Tue

Wed / Thur

Fri

What we will have by end of meeting...

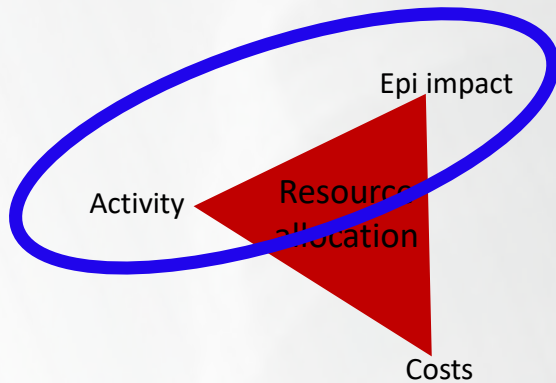

Mon / Tue

- Country level modelling
benchmarking, reporting and review
 - Summarise efforts so far
 - Discussed how to improve the approach
 - Discussed its role in country-level modelling applications
 - Identified next steps for implementation

What we will have by end of meeting...

Mon / Tue

- **Activity->Impact** evidence gaps for country level resource allocation
 - Summarise rationale for work
 - Leant of modelers recent experiences and new data extraction on ACF
 - Discussed if to bin or improve approach, how to scale up, and what (if any) TB MAC's role should be

What we will have by end of meeting...

Mon / Tue

- **Health Economics**

- Update attendees on TB MAC activities and links to consortia/initiatives – focus on resources useful for modellers
 - GHCC
 - Ref case
 - Unit cost study repository
 - WHO catastrophic cost data
 - Equity workshop
 - Tufts – CE analysis registry and DALY tools
- Your input on plans for next year

GHCC

**TB Modelling and
Analysis Consortium**

What we will have by end of meeting...

Wed / Thur

- TB MAC Modelling Research Group - **Key considerations for modelling of TB prevention**
 - Updated stakeholders on 5 “big” qus in modeling TB prevention
 - Prioritize potential manuscripts, tools, documents etc
 - Increased networking and sharing of knowledge between modelers, epidemiologists and other stakeholders

What we will have by end of meeting...

Fri

- TB MAC Modelling Research Group - [TB Vaccines](#)
 - Updated all w/ new preclinical/ clinical/ modelling results + upcoming data
 - Created [Framework](#) on quant modelling to accelerate TB vaccine devt
 - Manuscript submission?
 - ID'ed key problems/actions to improve utility of quant modelling
 - Vaccine dose/regimen selection
 - TB vaccine TPPs/PPCs and implementation
 - Increased networking

What we will have by end of meeting...

Fri

- TB MAC Modelling Research Group - **TB Diagnostics**
 - Updated stakeholders on incorporating diagnostic tests into TB models
 - Epidemiological impact, economics, early stages of TB, special populations, etc.
 - Potential manuscript
 - Increased networking

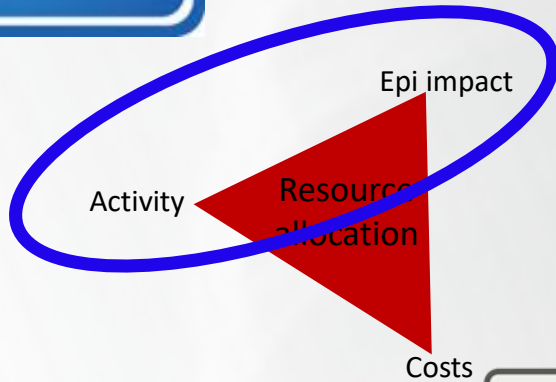

What we will have by end of meeting...

Mon - Fri

- Opportunity to access \$100k [funding](#)
 - shared across TB prevention, diagnostic, & vaccines
- [Report](#) with next steps

Overall outputs

Mon / Tue

Wed / Thur

Fri

Committee member input, logistics and questions

Let's get on with today...

Mon / Tue

- Country level modelling benchmarking, reporting and review
 - Summarise efforts so far
 - Discussed how to improve the approach
 - Discussed its role in country-level modelling applications
 - Identified next steps for implementation

The TB Modelling Roadmap - Rationale

- TB funders and stakeholders (BMGF, WHO, GFATM, USAID and World Bank) met in 2017
- Discussed how modelling could best support country level TB decision making
- Vision –
 - *Priority countries to have applied TB models and other decision tools to increase the efficiency, effectiveness, and resourcing of their TB response*

| Area | |
|---|---|
| 1. Close data gaps | a) Data collation/collection for model parameterisation to lin b) Data collation/collection for model parameterisation on e c) Data collation/collection for model parameterisation on p d) Data collation/collection for model parameterisation on p e) Cost data collation/collection for model parameterisation f) Definition of standardised TB health seeking behaviour as |
| 2. Model development and associated guidance linked to NSP processes | a) Clear guidance available on appropriate modeling appro b) Increased opportunities for models to validate assumption c) Models appropriately represent the health system charac |
| 3. Build 'international' and 'in-country' capacity to develop and apply models and guidance for the purpose of national policy and planning | a) Training package - Define standards and requirements f b) Training package - Catalogue of existing modelling tools c) Building capacity - Tool developers - Epi/Cost/Budg mod d) Building capacity - Train 'international' TA e) Building capacity - Train 'in-country' teams/TA f) Community - Catalogue of (trained) modelling capacity (a g) Community - Include trained individuals/teams in TB MA |
| 4. Models applied to | a) Prioritize policy questions - Determine key stakeholders |

The TB Modelling Roadmap - Objectives

- Objectives
 1. Closing data gaps
 2. model development and associated guidance
 3. building 'international' and 'in-country' capacity
 4. applying models to answer country policy questions
 5. coordinating and sharing experiences
- Being taken forward by the TB Modelling Roadmap Steering Committee
 - BMGF, WHO, GFATM, USAID and World Bank

TB Modelling and
Analysis Consortium

The TB Modelling Roadmap - TB MAC's Role

- Stakeholders asked TB MAC to:
 1. Facilitate the roadmap
 2. Create benchmarks, and set up reporting and review processes

TB Modelling and
Analysis Consortium

TB Modelling and
Analysis Consortium

The TB Modelling Roadmap - TB MAC's Role

1. TB MAC asked to facilitate
 - Asked to collate information, from modelling groups and global TB stakeholders on activities undertaken to support the Roadmap
 - To inform the TB Modelling Roadmap Steering Committee and help identify where gaps remain

TB Modelling and
Analysis Consortium

TB Modelling and
Analysis Consortium

The TB Modelling Roadmap - TB MAC's Role

2. TB MAC asked to create benchmarks, and set up reporting and review processes
 - developing a set of benchmarks against which modelling assumptions and results can be compared
 - developing standard reporting templates and checklists
 - developing an external review system

TB Modelling and
Analysis Consortium

TB Modelling and
Analysis Consortium

The TB Modelling Roadmap - TB MAC's Role

- **TB MAC's role focuses on 'public good' activities** that support the TB modelling community, as a whole
 - include collating, and sharing, information on activities towards the Roadmap, and developing guidelines
- **All decisions relating to the Roadmap remain those of the Modelling Roadmap Steering Committee**
 - Funding or prioritisation decisions remain those of the individual funder / stakeholders
