

Challenges associated with implementation of TB prevention at large megacities

Hamidah Hussain, IRD
September 13, 2018

Outline

- Background
- Pakistan
 - Process
 - Results
 - Challenges
- Bangladesh Program
- Questions for Modeling

Need to make TB prevention strategies a priority and focus

KEY TB STATISTICS

TB

is an

**airborne
disease**

TOP 10

causes for

**death
worldwide**

More than

1.7 MILLION
people died in
2016

ONLY 1.5%

of decline
of new TB
patients
per year

At this rate it will take

200 YEARS
TO ELIMINATE TB

Pakistan

Population 2016

193 million

Estimates of TB burden*, 2016	Number (thousands)	Rate (per 100 000 population)
Mortality (excludes HIV+TB)	44 (34–55)	23 (18–29)
Mortality (HIV+TB only)	2.1 (0.98–3.6)	1.1 (0.51–1.9)
Incidence (includes HIV+TB)	518 (335–741)	268 (174–383)
Incidence (HIV+TB only)	6.9 (3.2–12)	3.5 (1.6–6.2)
Incidence (MDR/RR-TB)**	27 (17–37)	14 (8.8–19)

IRD is amongst global leaders in TB elimination strategy

Zero TB CITIES is a global initiative targeted at creating “islands of elimination” with strong local ownership in high burden settings

Zero TB implements evidence-based **Search, Treat & Prevent** approaches from around the world shown to be successful in controlling TB

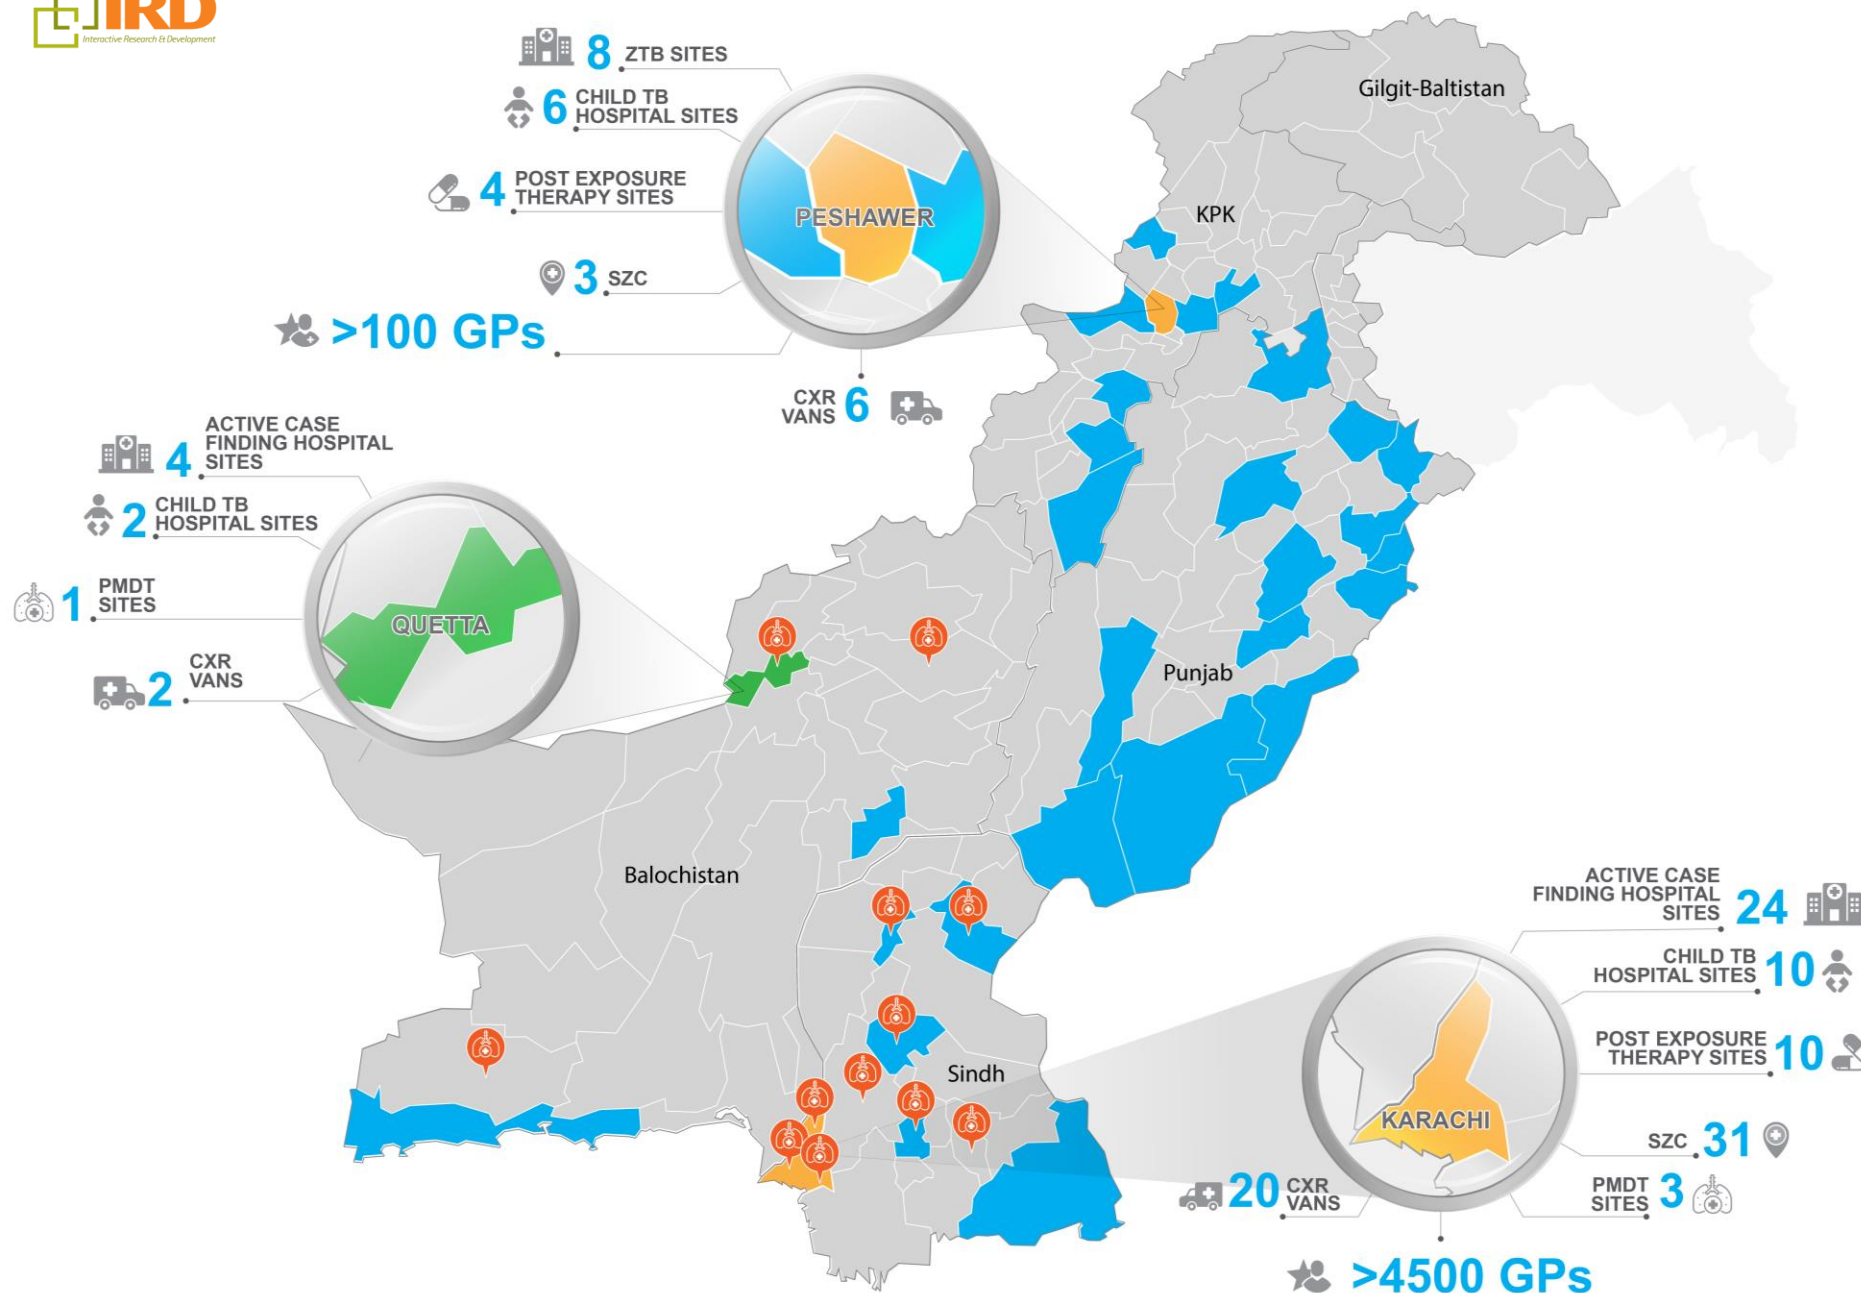

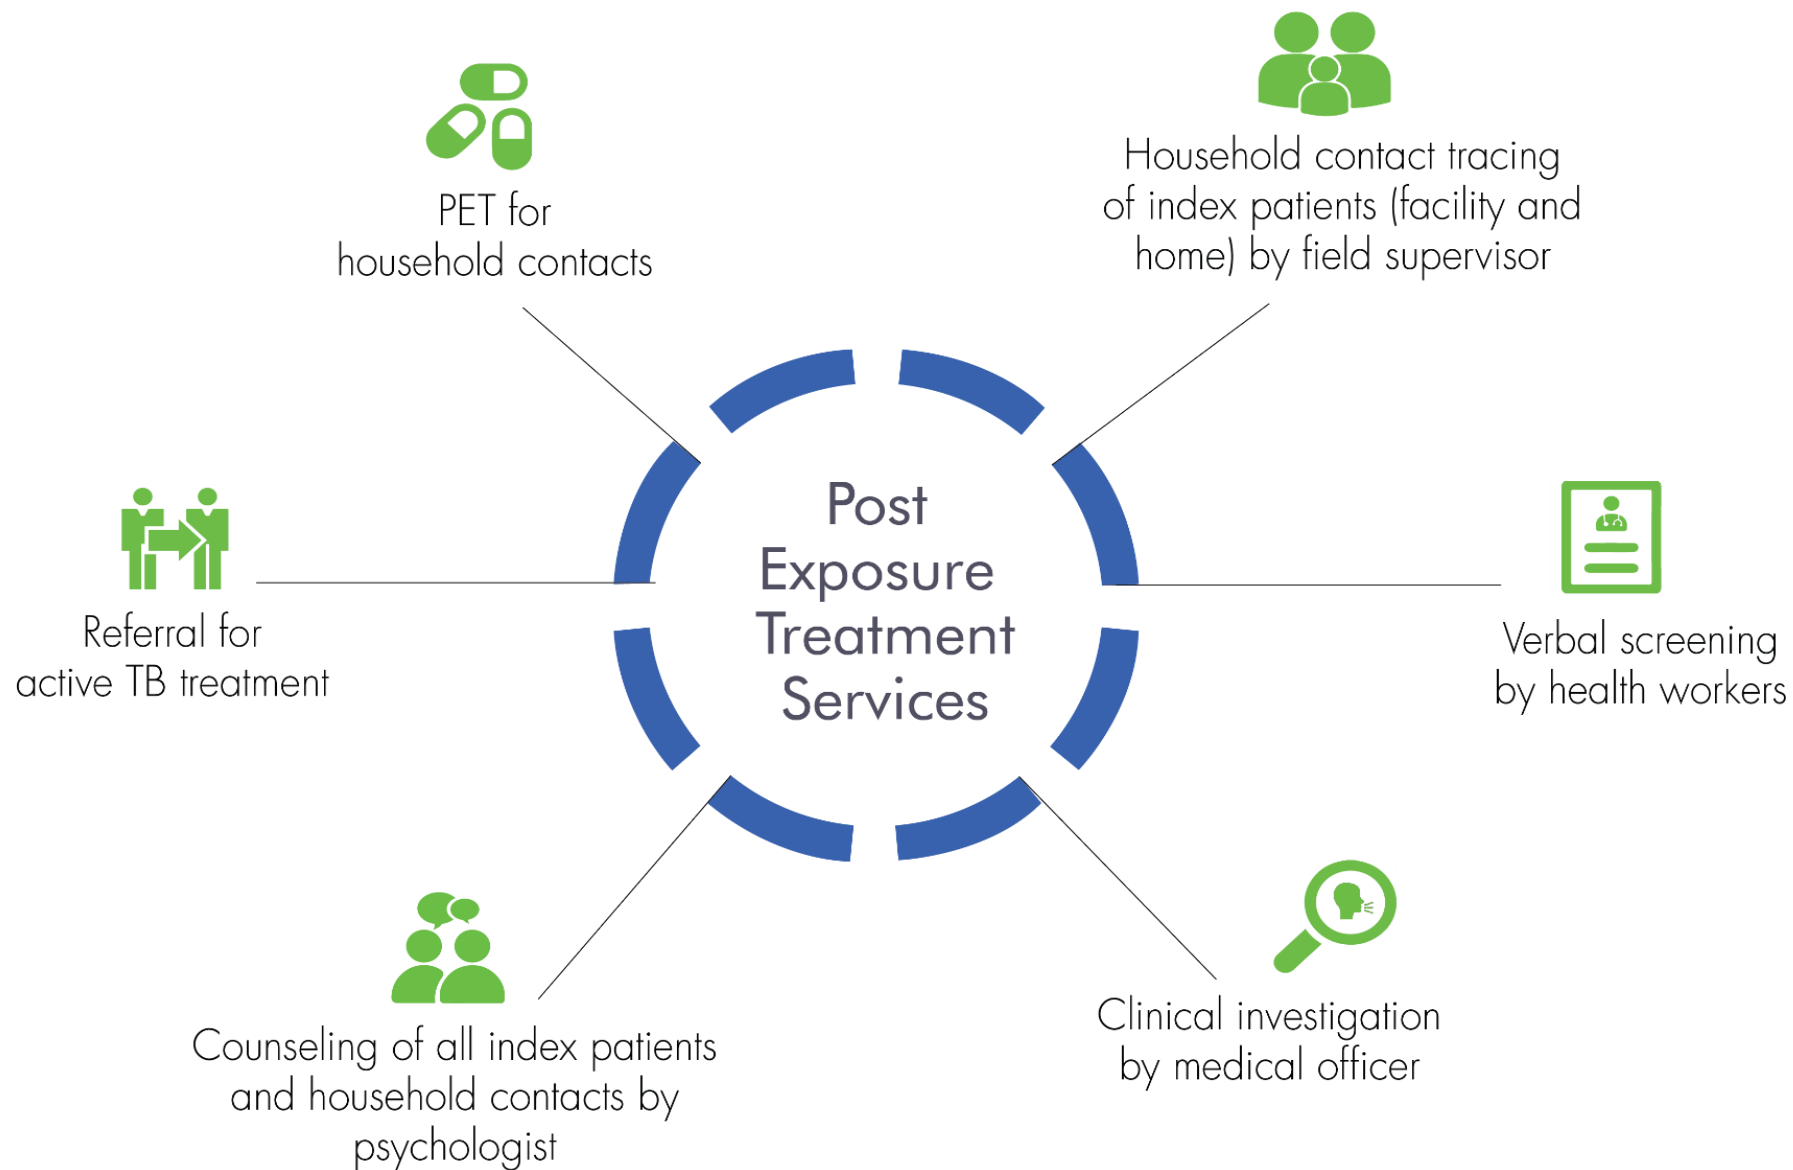

Pakistan's Zero TB Initiative

Global Fund Support
2016-2017 **USD 40m** – Zero
TB Karachi +32 districts

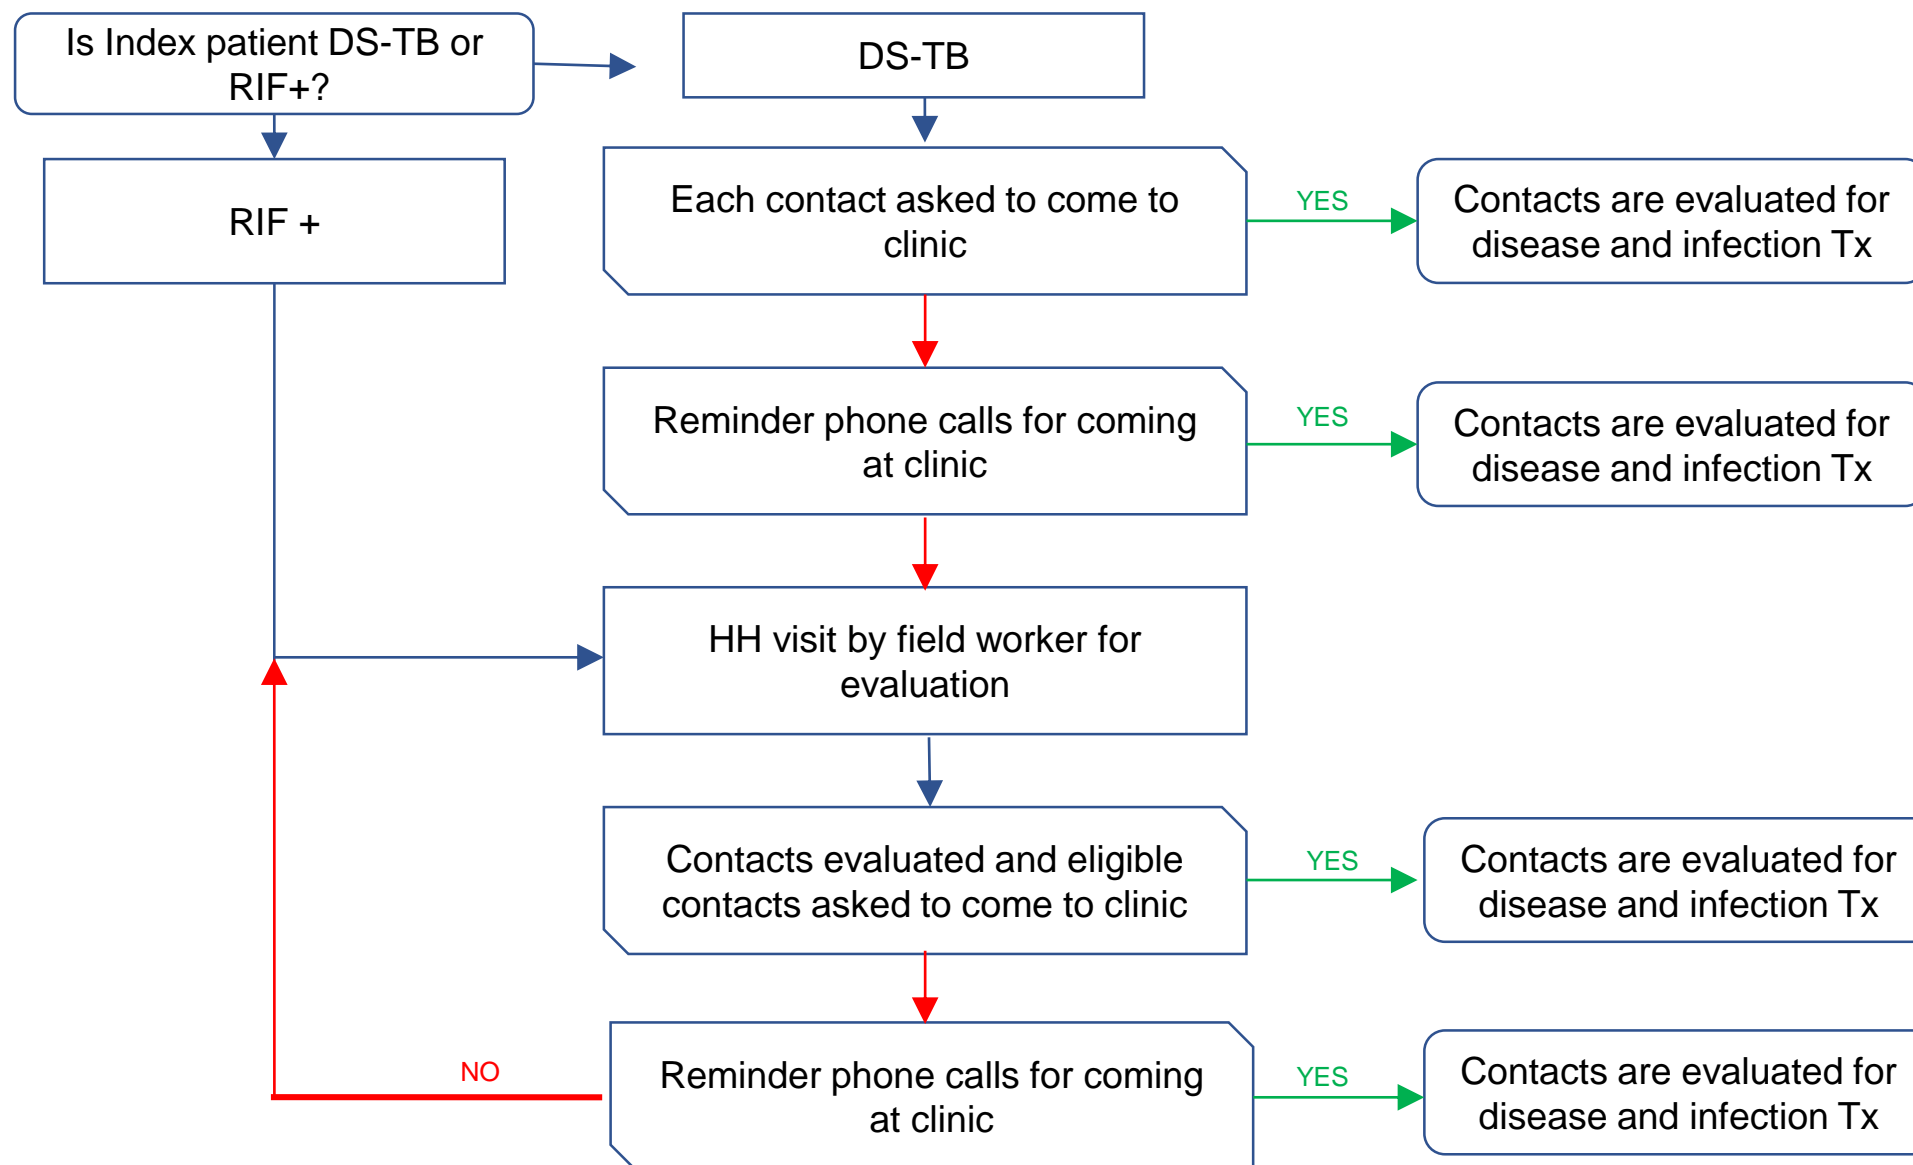

2018-2020 **USD 40m** – Zero
TB Karachi, Peshawar,
Quetta + 32 districts

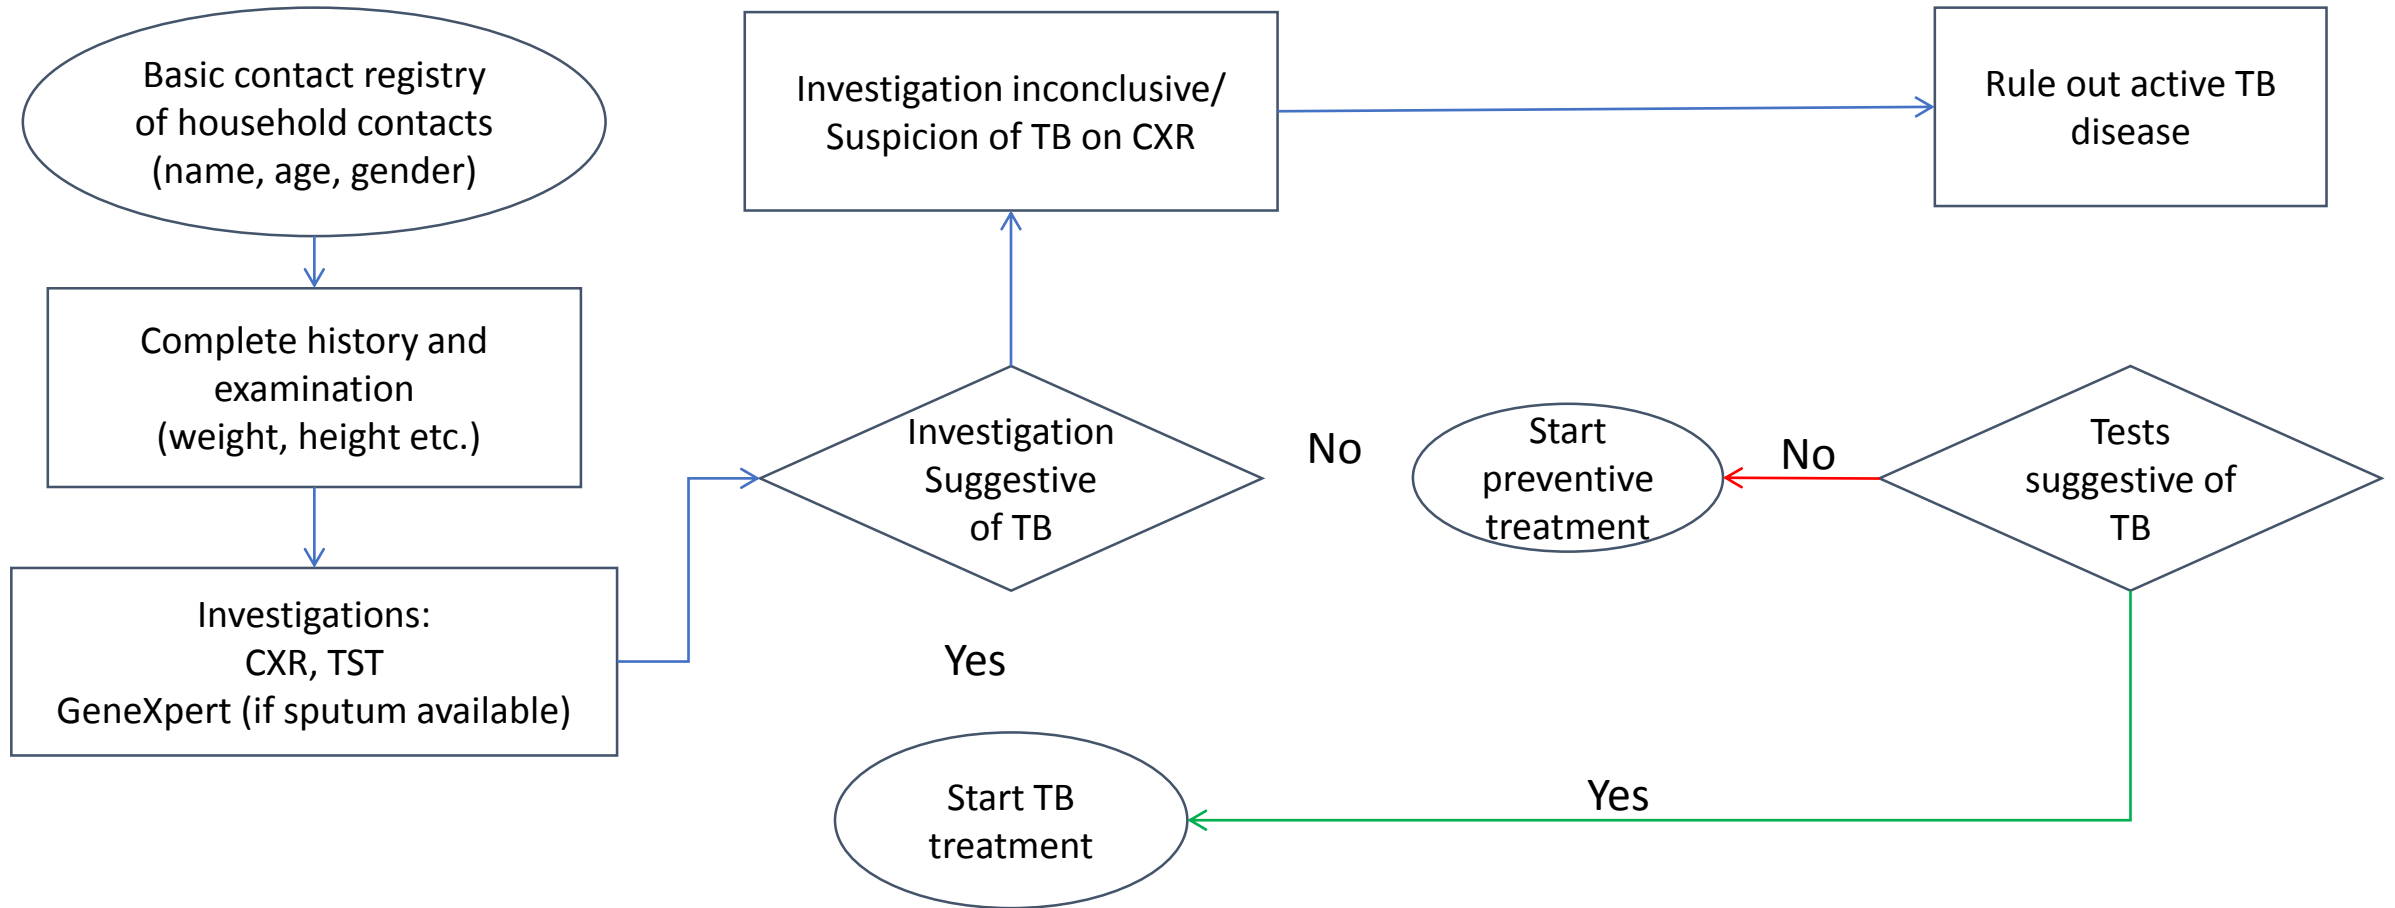

Algorithm for Household Screening

Algorithm to rule of TB disease

Counseling

- **Index patient and Contacts**

- Mode of transmission
- Risk to close contacts
- Importance of screening contacts for disease
- Importance of starting contacts on preventive treatment
- Importance of adherence and completing therapy

PET-Clinician Contact Screening

Form Date: 2018-02-26

Location: SZC-KNG

Adenopathy: No

Back pain: No

Body mass index: 14.61

Cough: No

Dyspnea: No

Exposure score: 6.0

Fever: No

Gastrointestinal symptom: No

Height (cm): 111.0

Index case coughing: Yes

Index case lives with contact: Yes

Index case meets contact daily: Yes

Index case mother of contact: No

Index case primary caretaker of contact: No

Index case shares bed with contact: No

Index case shares bedroom with contact: Yes

Index case smear positive: Yes

Index case with p-tb: Yes

Intervention: Pet

Joint swelling: No

Latitude (degrees): 24.886783

Longitude: No

Contact Symptom Screen

*Type of evaluation for disease

☐ Evidence based evaluation

☐ Clinical evaluation

Has TB disease been diagnosed

☐ Yes

☒ No

Has TB disease been ruled out?

☒ Yes

☐ No

Eligible for PET Yes

Does the contact agree to take PET?

☒ Yes

☐ No

Clinician's notes

Clear

Submit

Treatment Adherence - Reasons for Refusal

Type of Refusals	Reasons for Refusal			
Refusal at disease evaluation	Work and academics schedule		Family or Relatives are unaware that the Index Patient has TB disease	Waiting time at the hospital
Refused at treatment initiation	Lack of interest due to being non-symptomatic	Index patient is non-adherent	Adverse events to other household members	Death of Index Patient
Refused during treatment	Adverse events		Discouragement from other household members and private providers	Duration of PET

Qualitative Study on Preventive Treatment in Bangladesh

Perception on Preventive Treatment (TB patients and Contacts)

Lack of knowledge on **preventive treatment** for TB

Welcomed the idea as a **measure of self-protection**

High reliance on **doctor's suggestion** for preventive treatment

Preventive Treatment Regimen (Contacts and Providers)

Strong preference for **weekly doses** than **daily**

Acceptability of treatment for '**shorter period**' was high

Monitoring **treatment adherence** is critical

Qualitative Study on Preventive Treatment in Bangladesh

Preventive Treatment Implementation (Key Informants' views)

“Preventive treatment is the **most important way forward**”

“Should start preventive treatment as **pilot intervention** in urban settings”

“**Urban poor** demands special attention”

Expected Challenges and Barriers

Cost of treatment

Creating a balance between **additional task** to care delivery and **shortage of skilled providers**

Sustained Funding

Bangladesh Preventive Treatment

Generate evidence to support best practices for TB prevention. Pave a pathway for increased country demand for preventative therapy

Conduct gap
analysis for
key insights

Create Country
Implementation
Programs

Modeling &
cost analysis

Transition &
scale up
planning

Transition of
programs to
local NTPs &
partners

1) Can we identify a cut off point (magic number) for infection rates where the cost of preventive treatment out ways the risk of disease or vice versa

2) Under what epidemiological circumstances infection testing should be a requirement for preventive therapy among contacts

3) Protection levels with 3HP

4) Transmission models to identify prioritized areas for preventive treatment
